

It is the policy of FLI Water Ltd:

FLI Water Ltd's involvement with environmental improvement can readily be demonstrated in the products and processes we provide to our clients, as they improve the quality of water discharged back into the environment.

FLI Water Ltd has built a good reputation for the professional and trustworthy provision of products, processes, contract management and services to the waste water treatment and water treatment industries. As part of the company's drive to be a leader in its environmental business, a substantial part of our design incorporates the use of recycled domestic waste material, which is then itself recyclable at the end of our products lifecycle. The use of recycled material reduces the demand on landfill and natural resources.

FLI Water Ltd is committed to:

Promoting and maximising the use of recycled materials in its product range, and to reducing the environmental impact of processing and handling those recycled materials.

To seeking continuous improvement in the management and implementation of its business activities with regard to environmental impact.

General Policy Statement

- The senior management team and staff of FLI Water Ltd will meet or exceed the requirements of applicable environmental legislation. The Quality & Environmental Management System Manual is produced to demonstrate compliance with BS EN ISO 14001:2015. It contains environmental information applicable throughout the company.
- Activities of all employees are detailed in this manual and supported by environmental procedures. The system is integrated with the Quality Management System.

The key environmental impacts we are addressing are:

- To review environmental impacts within the design of our products.
- To minimise the potential negative environmental impact of our activities, and to maximise positive impacts.
- To minimise consumption of, and impact on, natural resources where practical.
- To continually improve environmental performance by reducing or recycling waste wherever possible.

To address these areas, senior management will:

- Provide sufficient information and training to enable employees to improve the company's environmental management systems.
- Provide the framework through the management meetings for setting and reviewing the company environmental objectives and targets.
- Encourage suppliers and sub-contractors to develop and apply the best possible environmental practice, and to monitor this in conjunction with the company's supplier evaluation procedures.
- Make environmental management an integral part of the company.
- Make available the necessary time and resources for the implementation of the policy and to review it annually.
